NHS CET product assessment cycle

Assessment Criteria

Packaging	The product type is clearly visible
	The volume of liquid contained in the packaging is clearly visible
	Area available on the pump action/ aerosol container to apply the patient's name label/ write the patient's name
	The pump action bottle and aerosol bottle is clearly labelled for single patient use
	The cap (screw top) on the pump action bottle should be smooth and not contain grooves (✓ = smooth with no grooves, ✗ = not smooth with grooves)
	Product flammability warning is clearly visible
	The product shelf life once opened is clearly identified on the packaging (pump action and aerosol spray)
	The expiry date, EN standards and CE marking are clearly visible
	The information is in English and clearly explains what is in the box (unit of distribution/ outer packaging)
	contra-indications for use are clearly displayed on the unit packaging.
	The product information leaflet can be easily read and understood
Opening and preparation for clinical use	Foam applicator packaging should have a clearly marked 'tear line', or a tab to enable ease of opening
	Foam applicator packaging should tear cleanly along the indicated line to allow access to the product
	Shrink-wrapped (tamper-proof) packaging applied to pump action spray bottles should be perforated for and clearly marked for opening
	Shrink-wrapped (tamper-proof) packaging applied to pump action spray bottles should be clearly marked for opening
	Pump action spray bottles and aerosol bottles should have a lid that can be easily replaced and maintained
Clinical Use	The product dries on application to the skin within 30 seconds
	The product is clear on the skin (no pigment)
	The product does not leave a tacky residue on the skin (The stars indicate the evaluators view of tackiness on the skin – No stars indicates high tackiness with two stars indicating no tackiness)
	The product has no odour 30 seconds after application (The stars indicate the evaluators view of product odour – No stars indicates an odour with two stars indicating no odour)
	The product can be applied to the skin at diverse angles from a pump action or aerosol container
	The product should be suitable for application to paediatric skin - information provided in the product literature to support this (✓ = information provided, ✗ = no information provided)
	The product does not prevent successful application of adhesive dressings to the skin (The stars indicate the evaluators view of successful adhesion – No stars indicates poor adhesion and two stars indicates high adhesion)

NHS CET product assessment cycle	Assessment Criteria
----------------------------------	---------------------

Packaging	The product type is clearly visible
	The volume of liquid contained in the packaging is clearly visible
	Area available on the pump action/ aerosol container to apply the patient's name label/ write the patient's name
	The pump action bottle and aerosol bottle is clearly labelled for single patient use
	The cap (screw top) on the pump action bottle should be smooth and not contain grooves (✓ = smooth with no grooves, ✗ = not smooth with grooves)
	Product flammability warning is clearly visible
	The product shelf life once opened is clearly identified on the packaging (pump action and aerosol spray)
	The expiry date, EN standards and CE marking are clearly visible
	The information is in English and clearly explains what is in the box (unit of distribution/ outer packaging)
	contra-indications for use are clearly displayed on the unit packaging.

Opening and preparation for clinical use	Foam applicator packaging should have a clearly marked 'tear line', or a tab to enable ease of opening
	Foam applicator packaging should tear cleanly along the indicated line to allow access to the product
	Shrink-wrapped (tamper-proof) packaging applied to pump action spray bottles should be perforated for and clearly marked for opening
	Shrink-wrapped (tamper-proof) packaging applied to pump action spray bottles should be clearly marked for opening
	Pump action spray bottles and aerosol bottles should have a lid that can be easily replaced and maintained

Clinical Use	The product dries on application to the skin within 30 seconds
	The product is clear on the skin (no pigment)
	The product does not leave a tacky residue on the skin (The stars indicate the evaluators view of tackiness on the skin – No stars indicates high tackiness with two stars indicating no tackiness)
	The product has no odour 30 seconds after application (The stars indicate the evaluators view of product odour – No stars indicates an odour with two stars indicating no odour)
	The product can be applied to the skin at diverse angles from a pump action or aerosol container
	The product should be suitable for application to paediatric skin - information provided in the product literature to support this (✓ = information provided, ✗ = no information provided)
	The product does not prevent successful application of adhesive dressings to the skin (The stars indicate the evaluators view of successful adhesion – No stars indicates poor adhesion and two stars indicates high adhesion)

Assessment Criteria

Packaging

The product type is clearly visible

The volume of liquid contained in the packaging is clearly visible

Area available on the pump action/ aerosol container to apply the patient's name label/ write the patient's name

The pump action bottle and aerosol bottle is clearly labelled for single patient use

The cap (screw top) on the pump action bottle should be smooth and not contain grooves
(✓ = smooth with no grooves, ✗ = not smooth with grooves)

Product flammability warning is clearly visible

The product shelf life once opened is clearly identified on the packaging (pump action and aerosol spray)

The expiry date, EN standards and CE marking are clearly visible

The information is in English and clearly explains what is in the box (unit of distribution/ outer packaging)

contra-indications for use are clearly displayed on the unit packaging.

The product information leaflet can be easily read and understood

Opening and preparation for clinical use

Foam applicator packaging should have a clearly marked 'tear line', or a tab to enable ease of opening

Foam applicator packaging should tear cleanly along the indicated line to allow access to the product

Shrink-wrapped (tamper-proof) packaging applied to pump action spray bottles should be perforated for and clearly marked for opening

Shrink-wrapped (tamper-proof) packaging applied to pump action spray bottles should be clearly marked for opening

Pump action spray bottles and aerosol bottles should have a lid that can be easily replaced and maintained

Clinical Use

The product dries on application to the skin within 30 seconds

The product is clear on the skin (no pigment)

The product does not leave a tacky residue on the skin
(The stars indicate the evaluators view of tackiness on the skin – No stars indicates high tackiness with two stars indicating no tackiness)

The product has no odour 30 seconds after application
(The stars indicate the evaluators view of product odour – No stars indicates an odour with two stars indicating no odour)

The product can be applied to the skin at diverse angles from a pump action or aerosol container

The product should be suitable for application to paediatric skin - information provided in the product literature to support this
(✓ = information provided, ✗ = no information provided)

The product does not prevent successful application of adhesive dressings to the skin
(The stars indicate the evaluators view of successful adhesion – No stars indicates poor adhesion and two stars indicates high adhesion)
